efficiency	- 1 %	- 2 %	- 5 %

Industrie Service

Regarding to the RLT-Guideline Certification:2017-11, the correction values listed below must be included into the air handling unit design software.

Installation losses for fans, impellers and fan walls C, Cpro, ZAbbluefin, ZAbbluefin-ECblue ZAvblue-ECblue and ZAvblue2-ECblue:

In the course of the certification of the fan design software FANselect 1.01. (x), all installation losses were checked according to the RLT-Guideline Certification:2017-11, for the fan types and impellers mentioned in Annexes 1 to 5.

If the correction values for the installation losses, of the design software FANselect 1.01., in accordance with the RLT-Guideline Certification:2017-11, are used for the fan types specified in Annex 1 to 5, **no** further correction values for the installation losses in the RLT design software must be taken into account.

If the correction values for the installation losses of the design software FANselect 1.01. are not used, the standard correction factors of the RLT-Guideline Certification:2017-11 must be used for the fan types and impellers listed in Annex 1 to 5.

Efficiency of the control equipment of the fan types C and Cpro with standard motor and impellers ZAbbluefin [f_R]:

The measurements carried out to certify the design software of the fan models and impellers mentioned above do **not** include the efficiency of the control equipment. When using the above mentioned fan models and impellers the correction factor of the control equipment shall be set to **f_R=0,97**.

Efficiency of the control equipment of the fan types C and Cpro with EC motor, ZAbbluefin-ECblue, ZAvblue-ECblue and ZAvblue2-ECblue [f_R]:

The measurements carried out to certify the design software of the fan models mentioned above includes the efficiency of the control equipment. When using the above mentioned fan models in combination with the EC motors listed in Annex 1 to 5 the correction factor of the control equipment shall be set to **f_R=1,00**.

Nominal motor efficiency of the impeller type ZAbbluefin [f_M]:

The measurements carried out to certify the design software of the impellers mentioned above were carried out on bar shaft fan. When using the above mentioned impellers the correction factor of the nominal motor efficiency shall be set to **f_M=0,98**.

Nominal motor efficiency of the fan types C and Cpro, ZAbbluefin-ECblue, ZAvblue-ECblue and ZAvblue2-ECblue [f_M]:

The measurements carried out to certify the design software of the fan models mentioned above were carried out with fan and motor combinations. When using the impeller-motor systems listed in Annex 1 to 5 the correction factor of the nominal motor efficiency shall be set to **f_M=1,00**.

Industrie Service

Part load efficiency of the impeller type ZAbbluefin [f_{TL}]:

The measurements carried out to certify the design software of the impeller model mentioned above were **not** carried out in part load. When using the above mentioned impeller models the correction factor of the part load efficiency f_{TL} shall be calculated as shown below.

Part load efficiency of asynchronous machines:

The efficiency in the part load area is calculated with the following correction factors:

In the complete load range (LR) in % with $f_{TL} = -0,00004 \times (LR)^2 + 0,008 \times (LR) + 0,6$

Part load efficiency of synchronous machines:

The efficiency in the part load area is calculated with the following correction factors:

In the load range (LR) < 50% with $f_{TL} = 0,056 \times \ln (LR) + 0,78$

In the load range $\geq 50\%$ with $f_{TL} = 1,00$

With:

(LR) load range [%]

Part load efficiency of the fan types C and Cpro as well as ZAbbluefin-ECblue, ZAvblue-ECblue and ZAvblue2-ECblue [f_{TL}]:

The measurements carried out to certify the design software of the fan models mentioned above were carried out in part load. When using the above mentioned fan models the correction factor of the part load shall be set to $f_{TL}=1,0$.

Accuracy class of the fan and impeller types C, Cpro, ZAbbluefin, ZAbbluefin-ECblue, ZAvblue-ECblue and ZAvblue2-ECblue [f_G]:

Due to the accuracy class specified by the manufacturer, the correction class shall be set to $f_G=1.00$.
